

October 29, 2012

Dear Boston Globe:

This is not a Halloween prank. The enclosed Police Reports show the remains are real. As if the problems with the State Crime Lab aren't bad enough, they just got worse.

A friend of mine worked for the Crime Lab for many years and was told one day to dispose of these remains. I am a doctor and in 1978 he sent them to me. I never felt right about this, but it was better than the remains going to a landfill.

The report dated October 25, 1976 suggests that one skull might belong to Jana Coonan, since the other female victim's maxilla was edentulous. Thirty six years have passed. Maybe now it is possible to analyze whatever DNA is left in tooth number 3 to positively identify this skull.

Please see that justice is done now for the sake of these two victims.

Thank you

A concerned citizen who would not want this to happen to my loved ones or to me
